Ethernet For Business

National Ethernet is an un-contended connection of between 2mb – 100mb, this can be either and On-Net Connection (connection to the Internet) or it can be a private circuit between remote locations.

Whether you have locations 100metres or 100mile apart, or you need a fast connection to the Internet, we can provide reliable connectivity with a guaranteed up-time and bandwidth.

We install 100mb capable connections to your site whilst you only pay for the bandwidth you require, this means that we can provide companies with low cost, un-contended, easy to maintain Ethernet Circuits that are protecting you from the need of making any further capital expenditure in the future. Increasing your bandwidth is as simple as making a call or sending an email, and the only additional cost is a small increase in your monthly line rental.

The benefits of National Ethernet:

- **Secure** - Allowing you to transfer critical data between sites without having to worry about your data getting into the wrong hands.
- **Fast** - Giving you the ability to stay productive a stay ahead of the competition.
- **Reliable** - Always connected technologies with 4-6 hour fix time SLA's give you the confidence to put your business critical network in our hands.
- **Scalable** - Easily increase your bandwidth to match your requirements.
- **Reduced Costs** – Greatly save on call costs and reduce infrastructure costs by running both voice and data over a single network.

Why choose AdaptiveComms for National Ethernet?

AdaptiveComms is an **expert** in connectivity solutions for businesses. By working with market leaders, we can deliver first class National Ethernet circuits to any size of business that we will fully implement and manage.
